

Before you cut: the pre-build checklist

A free planning aid for the concealed towel hook digital kit. No registration required.

☐ **1. Wall construction**

Establish a suitable solid backing. This kit excludes hollow walls and tiled sheet material on framing. Unknown backing is a reason to pause.

☐ **2. Space for the assembly**

The creator states a 25 mm opening and about 80 mm behind the tile. Confirm the complete assembly dimensions in the actual installation documentation.

☐ **3. Concealed services**

Check for wiring and pipes before drilling. This checklist cannot establish that a particular location is safe.

☐ **4. Exact hardware**

Confirm the long K-Push mechanism specified by the creator. Do not assume a short latch or similar hardware is interchangeable.

☐ **5. Files and license**

Review the current STL/3MF file inventory, license and supplied instructions on Cults3D. No physical hook is shipped.

☐ **6. Tools and tile finish**

Plan printing, suitable adhesives and cutting tools. Use an off-cut or spare tile to assess the cut and pattern before the final wall.
